

Will the AR application be used by users (Organisations) of the RunMyProcess? (Please underline your choice.)

Yes – No

Who else will use the application? Please list the potential users.

Plans on enabling users share important details with business consultants of organisations.

Which age group does your target audience belong? You can select multiple answers if you target multiple age groups.

A - 0 - 17

B - 18 - 30

C - 31 – 40

D - 41+

What do you believe is the technical knowledge level of your target audience?

1 - Very Technical (E.g. Software Engineer.)

2 - Average (E.g. Has a limited knowledge.)

3 - Less than Average (E.g. No technical knowledge.)

4 – All of above.

Does the story board represent the workflow of the application you desire? Please explain.

Overall yes, higher level project view is good. Application needs to have graphs on project performance. Project performance means how many processes are passing, failing or pending. Rather than displaying all processes application should display only the pending or failing ones.

What is the most common operating system/operating systems used by your potential users?

1 – iOS – 2nd

2 – Android – 1st

3 – Windows

4 – Other

If other, what do they use?

- No comments on this question.

What benefit do you think AR will provide over the web application you have?

No specific context Easier to go into more detail. Benefits of having AR to improve website.

Do you have any further requests or comments? (Time ran out.)
